

Range365™

FULLY CUSTOMIZABLE, CLOUD-BASED CYBER RANGE PLATFORM

Ensure Your Cyber Defenders Are Ready for the Expanding Threat Landscape

Range365 is the industry's leading, enterprise-grade, hosted cyber range solution. It provides organizations with a training and testing ground for their security professionals to use, ensuring they are staying ahead of the latest threats while being able to test unlimited scenarios. Just as a flight simulator prepares pilots for flight, Range365 provides a safe, flexible, scalable environment and unlimited simulated attacks to allow security practitioners to test and prepare for inevitable cyber attacks.

RANGE365 USES

 PRODUCT DEMOS	 IT/OT CONVERGENCE TESTING/TRAINING	 NEXT-GEN TABLETOP EXERCISES
 PRODUCT/TOOL INTEGRATION TESTING	 RUNBOOK VALIDATION	 RED TEAM/BLUE TEAM/PURPLE TEAM TRAINING
 LIVE-FIRE ATTACK EXERCISES FOR SOC & IR TEAMS	 ASSESSING CANDIDATES	 CAPTURE THE FLAG EXERCISES
	 PENETRATION TESTING	

No Infrastructure or Hardware Required: Range365 is a scalable, cloud-hosted cyber range that is customized to mimic infrastructure and security tools in any organization. Hosted by Cloud Range, the safe, realistic environment is a replica of the security operations center (SOC), including actual licensed SIEMs, firewalls, and other security tools teams use every day.

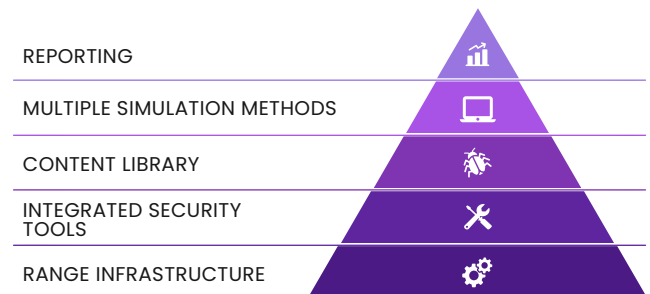

Custom Tool Integration: Range365 can include almost any virtualized security tool or industrial control system.

Unlimited Content/Scenarios: Range365 includes Cloud Range's extensive library of attack scenarios that are developed to reflect tactics, techniques, and procedures being used by threat actors. Scenarios cover all elements of the MITRE ATT&CK Framework to ensure that your team has the ability to train on defending even the most advanced attacks.

Optional Instructors/RangeMasters: Cloud Range has experts ready to help with integrating new tools, creating scenarios, or designing and leading exercises for your team.

OT/ICS Options: For critical infrastructure organizations, Range365 has optional OT/ICS segments that include HMI, PLCs, and monitoring tools as well as attack scenarios that are specific to control system environments, regardless of where the attacks originate.

Measurable Success: See performance results for individuals and teams, understand where to bridge gaps, and measure reduced risk in Cloud Range's Performance Portal (LMS), which can be integrated with your learning management system.

Range365 gives organizations the benefits of having a custom-built cyber range, without the costly investment of infrastructure, technology, content creation, or administration. With customizable IT and OT/ICS networks and a library of live-fire cyber attack scenarios, Range365 provides the control and resources to train and test people, processes, and technologies as needed.
